

The University Campus Card **Moving to the future with a ChipNet3®** **system**

Introduction

Unrivalled experience with educational institutions, acquired through years of supplying multi-application card systems, has given Infineer a unique understanding of the campus environment, its demands and expectations.

Many colleges and universities already employ cards, primarily for identification or as a payment tool to allow students to purchase prints or photocopies. The introduction of a multi-application ChipNet3® Campus Card to the university, offers the administrator the opportunity to focus all of their application needs around a single smart card designed to **decrease** administrative costs and **increase** campus revenues.

By automating small value transactions, such as buying lunch in the cafeteria, buying a drink at a vending machine, paying for library fines, paying for PC, Internet and copier usage, campus administrators can reduce overhead, improve cashflow, prevent theft and vandalism and reap the rewards of comprehensive management reports.

A single smart card **for multiple** **applications!**

Each student carries a smart card, which can be loaded with a “cash” value. The card is based on the debit card concept so funds must be loaded onto the card before they can be spent. This secures cash in advance for the campus administration.

When value has been loaded onto the card it can be used to pay for a range of key services.

- Payment for Meals in the Cafeteria including pre-paid meal plans and subsidy schemes
- Payment at Automatic Vending machines
- Payment at Campus Stores and administration of parental book allowances
- Payment for recreational club access and block tickets
- Payment for the use of Photocopiers
- Payment for the use of PCs and Network Printers
- Payment for time spent on the Internet

The solutions are driven by the ChipNet3® system's powerful back office software, which defines card user rights, permitting the allocation of subsidies and discounts to individual users.

ChipNet3 software also tracks, records and processes each transaction providing comprehensive management information at the touch of a button. Full details of **Who** did **What**, **Where**, **When** and for **How Much** are recorded for each transaction!

Getting the most From your Campus Card

As a skilled systems integrator, your Datacard Group dealer delivers a solution centered around a multi-functional smart card that meets the requirements of specific sites. The power of this solution is built around strategic partnerships with specialist suppliers of library management packages, student and staff identification systems, campus wide access control, time and attendance tracking, banking services and settlement software. In addition to the chip, a variety of additional features including magnetic stripe, barcode and proximity technologies can be incorporated on the staff and student cards. The systems integration mentioned above facilitates additional complementary card functionality including:

- Student / staff ID card identification
- External and internal door access
- Campus Residence control
- Library services
- Time and Attendance Tracking
- Examination Register
- Access to Student Records
- Student Voting
- Loyalty Schemes
- Biometrics

The ChipNet3 system provides a university with a solid application backbone which is reliable, completely scalable and integratable with other software systems.

Your ChipNet3 system can grow to meet the ever changing needs of your campus, giving you peace of mind for the future.

No site too large

We have used our experience of large campus card projects to ensure that the administration software is simple and intuitive to use and great care was taken so that the ChipNet3 system reporting module is capable of producing real-time reports quickly and with pin point accuracy.

Card Issuance

One of the key requirements for a large campus is the provision of a fully integrated ID management system that an enrollment department can use to capture student images and automate the card issuance process.

The ChipNet3 system Card Issuance Module is a fusion of Datacard® ID Works® identification software and ChipNet3 software, which can power as many Datacard® card printers as necessary. ChipNet3 software can be extended to automatically access the university's student records database for data and photograph retrieval. Card production is as simple as a single button click from the ID Works software production application.

Off the shelf applications

The ChipNet3 system offers reliable, off-the-shelf applications that have a proven track record in even the toughest environment.

The ChipNet3 system has been designed and manufactured so that each ChipNet3 system building block fits perfectly and produces a solution that is fully integrated and provides the maximum management feedback.

What potential could you unlock for your campus?
