

**Why Your IT Department
Should Be Looking At
Patient ID XPress™**

Easy To Install & Implement ~ Patient ID XPress™ requires little or no involvement from your IT Department to implement. Workstations are shipped ready to use!

“We were able to transition each of our hospitals from card printing to bar-code wristbands and labels in one day!”

Easy To Use ~ Your staff has enough to do without implementing complicated process changes. Simply scan the Master Label and get patient labels & wristbands anywhere instantly.

“The label and wristband printers are simple, easy to operate and user friendly for our staff”

Easy To Afford ~ Are you tired of paying the high supply costs of your laser printed labels & wristbands? Looking to eliminate the maintenance costs of your old card based system? Patient ID XPress™ is affordable to purchase and operate.

Easy To Read ~ No more unreadable imprints on your patient documents. You get crisp, clear labels and wristbands with or without bar-codes anytime and anywhere you want.

Label Station & Wristband Station

Patient ID XPress™
Modular Workstations

**Patient ID XPress™
Workstations
For All Your Labeling
Requirements**

Patient ID XPress™ Data Capture Station:

-one-to-one replacement of your embossing printer for Patient ID labels.

Patient ID XPress™ Off-Line Data Capture Station:

-off-line, keyboard data entry system for printing Patient ID labels.

Patient ID XPress™ Wristband Station:

-includes off-line printer & scanner. Scans the Patient ID labels and prints bar coded wristbands.

Patient ID XPress™ Label Station:

-includes off-line printer & scanner. Scans the Patient ID labels and prints bar coded labels.

*Patient
Identification
Wristbands &
Labels*

The Simple Solution *...To replace your plastic card system*

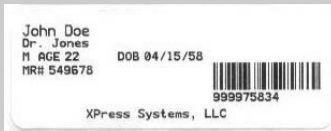

“Since the printers are not networked, we could relocate the wristband and label printers anywhere in the hospital or the Nurses stations”

Marth Tilson, Tri-Health Systems

Hospital and Healthcare Systems can now quickly, easily and economically update from their embossing system to an improved technology-driven patient identification system that produces labels with or without bar codes. The **Patient ID XPress™** Data Capture Station converts your existing embosser data stream into a ‘Master Patient Label’.

This ‘Master Patient Label’ is then used to produce both your (bar coded) wristbands and patient documentation labels.

Wristbands and patient labels are customized to your Hospital Information requirements. **Patient ID XPress™** Label Stations and Wristband Stations are off-line systems and can be placed anywhere you have the need for wristbands and labels.

Sample Patient Label

Meeting the Standards

Positive patient identification is not just a Hospital’s mission, but now it is part of a growing legislative mandate for patient safety. Plastic card embossing and imprinting systems are quickly being phased out and replaced by technology-based barcode systems.

“We needed a system that would complement our new bedside medication scanning system”

Since January 2004, **JCAHO** will be surveying facilities for the procedure of having at least two patient identifiers whenever taking blood samples or administering medications and blood products. In addition the **FDA** has issued a final rule that requires bar codes on most prescriptions for positive patient identification when dispensing drugs.

Minimal IT Involvement Required

Patient ID XPress™ provides your Hospital an easy and simple turnkey solution for implementing barcode wristbands and documentation labeling using your existing embossing system. **Patient ID XPress™** requires minimal IT involvement for it’s installation and implementation.

- ◆ No network drops or connections
- ◆ No programming
- ◆ No interface or network integration

“Because the same printers are used for all label printing, we are able to use the same supplies thru out the entire facility”

No longer will you be wasting expensive materials by having to produce an entire sheet of labels to get just one label. With just a quick scan, **Patient ID XPress™** Labeling Systems print just the number of patient labels you need when and where you need them.

Supports 24/7 Operation

“The feature that separated Patient ID XPress™ from any of the other solutions was it’s ability to support our operations during network downtime”

On-line and Off-line Data Capture Stations keep your facility running 24 hours a day. The unique Off-Line Data Capture Station allows your facility to produce Patient ID Labels & wristbands even when your HIS System is down.

*When your Hospital System is down..
Patient ID XPress™ keeps working!*

The Off-Line Data Capture Station is a small, self-contained system that fits anywhere in your department
